

Below is a **comprehensive Requirement Specification + Product Design Document** for your **Sharia-Compliant Muslim Matrimony Platform**, consolidating all discussions so far into a structured product document.

This is written in a format suitable for founders, designers, developers, investors, and future technical teams.

1. Project Overview

Project Name (Working Title)

Sharia-Compliant Muslim Matrimony Platform

Vision

Build the world's most trusted Muslim marriage platform that prioritizes marriage over dating, family involvement over secrecy, privacy over exposure, and trust over engagement metrics.

Mission

Enable Muslims to find compatible spouses through a **safe, verified, family-aware, privacy-first, and Islamically guided marriage process**.

Core Principles

- ✓ Marriage-first, not dating
- ✓ Wali and family involvement
- ✓ Female privacy by default
- ✓ Structured communication
- ✓ Serious-intent matching
- ✓ Trust & verification
- ✓ Islamic guidance and etiquette

2. Target Users

Segment	Primary Need
Bride	Safe, serious, respectful proposals
Groom	Verified compatible matches
Parents	Trust, family compatibility
Wali/Guardian	Oversight and participation
Community Matchmakers	Reliable introductions

3. Product Scope

Included

- User registration
- Verification system
- Wali workflows
- Privacy-controlled profiles
- Compatibility matching
- Structured discussions
- Family dashboards
- Trust & risk scoring
- Islamic guidance engine
- Admin moderation
- Subscription billing

4. Functional Requirements

4.1 User Registration High Priority

Mandatory Fields

- Gender
- Age
- Country

- Phone number
- Email
- Looking for marriage (Yes/No)

Registration Types

- Self
- For Son
- For Daughter
- For Brother
- For Sister
- Family Representative

 4.2 Verification System

Core Trust Feature

Verification Methods

Method	Required
Phone OTP	Yes
Email OTP	Yes
Selfie Verification	Optional
Liveness Detection	Optional
Video Verification	Premium
Family Verification	Recommended
Wali Verification	Recommended

Trust Tiers

Tier	Score
Unverified	0–24
Basic Verified	25–49
Real Person	50–69
Trusted Member	70–84
Family Verified	85–94

Tier

Score

Highly Verified

95–100

4.3 Profile System High Priority

Profile Categories

- Basic identity
- Marriage status
- Education & career
- Religious profile
- Family background
- Lifestyle
- Marriage expectations
- Privacy preferences

Important Fields

Category	Examples
Religious	Prayer consistency, Madhab, Hijab/Niqab, Quran engagement
Lifestyle	Smoking, Vaping, Alcohol, Exercise
Marriage	Children preference, Relocation, Working after marriage
Financial	Income range, Housing status, Mahr expectations

4.4 Female Privacy Controls Critical Requirement

Default Rules

- Female photos hidden by default
- Phone hidden
- Email hidden
- Last seen hidden
- Location partially hidden

Photo Visibility Levels

Level	Description
0	No photo
1	Blurred silhouette
2	Wali-approved viewing
3	Mutual interest + approval

4.5 Wali & Family Workflow

Differentiator

Flow

- ✓ Female registers
- ↓ Choose wali involvement
- ↓ Add wali
- ↓ Wali verifies
- ↓ Wali receives notifications
- ↓ Wali approves progression
- ↓ Family meeting
- ↓ Nikah planning

Wali Permissions

- View incoming interests
- Approve photo sharing
- Join discussions
- Schedule meetings
- Block suspicious users

4.6 Structured Communication

No Casual Chat

Communication Stages

Stage	Topics
1	Religious practice
2	Marriage expectations
3	Children & family
4	Finances
5	Living arrangements
6	Final compatibility

✔ Next stage unlocks only after previous stage completion.

5. Matching & Search System

🔍 Compatibility Filters

🌙 Religious

- Madhab
- Prayer consistency
- Quran engagement
- Islamic education
- Hijab/Niqab preference

👤 Personal

- Age
- Height
- Language
- Country
- Ethnicity

💕 Marriage Expectations

- Children preference
- Relocation willingness
- Working after marriage

- Polygyny preference

6. Trust & Safety

Risk Detection

Detect

- Fake profiles
- Duplicate accounts
- Mass messaging
- Harassment
- Romance scams
- Inappropriate language
- Suspicious behavior

Risk Score

Each user receives a **0–100 risk score**.

Auto Actions

Score	Action
0–30	Normal
31–60	Monitor
61–80	Restrict messaging
81–100	Manual review

7. Sharia Compliance Engine

Rules Engine

Triggers

- Excessive chatting
- Romantic language

- Early contact sharing
- Repeated profile stalking
- Inappropriate messages

Response

- ✓ Show relevant Quran verse
- ✓ Show authentic Hadith
- ✓ Provide Islamic etiquette guidance
- ✓ Suggest involving wali

8. Monetization

Pricing Model

User	Pricing
Women	Free forever
Men	Paid subscription

Plans

Plan	Features
Basic	Limited interests
Premium	Advanced filters, more interests
Elite	Priority support, consultant

9. Technical Architecture

Frontend

- ✓ React + TypeScript
- ✓ Tailwind CSS
- ✓ React Query
- ✓ React Hook Form

Backend

- ✓ Node.js / NestJS
- ✓ PostgreSQL
- ✓ Redis
- ✓ S3-compatible storage

Core Tables

-  users
-  profiles
-  religious_profiles
-  wali_accounts
-  interests
-  discussions
-  verifications
-  trust_scores
-  risk_scores
-  audit_logs

10. Admin & Moderation

Admin Dashboard

Features

- User management
- Verification review
- Fraud queue
- Appeals queue
- Risk monitoring
- Analytics
- Subscription management

Scholar Dashboard

- Review escalated cases
- Publish guidance
- Moderate disputes

11. MVP Roadmap

Wali participation

Structured discussion completion

Safety reports

Final Strategic Positioning

This product should be positioned not as "Muslim Tinder" but as a "Digital Marriage Operating System" where families, wali, trust, verification, and Islamic etiquette are built into the core workflow.

That positioning becomes the platform's strongest competitive advantage against Muzz, Shaadi, Muslima, and other matrimony products.
